Zone. - Enter the desired password to access the Password Recovery Zone. - Enter the desired password to access the Secret Zone. - Enter the desired password to access the Password Recovery Zone. - Enter the desired password to access the Secret Zone. - Enter the desired 2edc1e01e8

MyDataZone is a DataTraveler Secure tool that enables you to create and access a user defined password-protected area called a Privacy Zone, on your DataTraveler Secure drive. With MyDataZone you'll be able to easily create a secure space where you can keep your files onto the Kingston DataTraveler Secure device. MyDataZone works by masking the keys that identify your files with a hash of its own. This hash, called the MyDataZone Hash, prevents any unauthorized person from

accessing your files. To use MyDataZone with your DataTraveler Secure, you must have a pre-configured, user-defined password-protected area on your device that you can use as the base for your Privacy Zone. To add MyDataZone to your device, follow these instructions: 1) Open the Kingston DataTraveler Secure software. 2) Tap on the Home tab. 3) Tap on the blue Privacy Zone icon. 4) A box will appear on the screen. 5) Tap the box to add your Privacy Zone. 6) Tap OK. 7) On the main menu, tap

on the desired Privacy Zone to access it. By default, MyDataZone uses your pre-configured device for Privacy Zones. To use an alternate device, simply change the device by tapping on the blue icon that appears on the screen. MyDataZone will then ask if you want to store your passwords in the alternate device. When you are finished, tap on the blue button that appears on the screen to close the settings. Now you are ready to start using the Privacy Zone. The first time that you use MyDataZone,

you will be asked for your Kingston DataTraveler Secure Password. For security purposes, it is recommended that you use a different password than you use for all of your Kingston DataTraveler Secure device settings. After MyDataZone has created your Privacy Zone, you can access the files using the special hash, rather than the file's actual name. For example, if you have a file called MyPassword-book.pdf, and you create a Privacy Zone called MyPassword, you can access

that file using the password
MyPassword instead of using
the actual file
