Personally, I think Lightroom is compelling. And aside from the standard tools, there's many great features in Lightroom for photographers of all ages – from a beginner only just exploring the world of photography to veteran professional. It's also extremely affordable. The paid version is currently starting at $29 (subscription starts at $10 a month) and is definitely worth any photographer's consideration. In this article, I will discuss my experiences with the architecture of Lightroom 5. But before I will continue, I must say that if you are a Lightroom user from version 3.x you will instantly notice that Lightroom 5 for photographers is a whole different beast. In essence, the Library/Catalog will store all your content (i.e. your original images, image adjustments made, as well as metadata) in the future. That means that instead of dealing with opening a Lightroom window for every single image, you'll just have to open a Lightroom window with your catalog panel. You'll be able to drag and drop your images, as well as make adjustments to them simultaneously. The smart thing about all this is that you'll have a good handle the files stored on your hard drive – meaning you won't lose them either. One of the biggest points I was concerned about was that if I accidentally click the Edit Images button, I will lose all my images. Fortunately, with Lightroom 5, there's still good old-fashioned Backspace (Backspace is located on the keyboard at the number 5 position). You can unselect what you want to delete, so there's no need to worry if you're click the Edit Images button by mistake.
