Both the \$75, ACDSee Studio Magic 8 image-editing software, one of the components of the full \$250, Adobe Photoshop Express software solution, and the new \$150, Adobe Photoshop Express, which, though initially geared towards mobile photography, can be used for any kind of image editing, are designed to be a cross between ultra-easy 2- or 3-step photo retouching and so-called "enhancement" programs with more complex and powerful features. For those looking to dabble in photography, the ACDSee Studio Magic 8 digital photography program is for learning, getting creative shots or snapping decent holiday snapshots, but has the basics anyone can use, and it is rather expensive for the average user, who may not want to pay for a complete photo-editing package. Adobe has also introduced the availability of very basic photo editing features for \$19.99. The Lightroom Express is a stripped down version of Photoshop Lightroom, useful for getting started quickly with digital images. It even can be used in the most basic photo operation. Both the Lightroom and Lightroom Express are in beta. Not only can you try them for free, but you can also do so by invitation only, after registering to become a tester. Both the \$99 Adobe Creative Cloud Photography plan (with full Photoshop) and the \$59 Adobe Creative Cloud Photography Collection (with Photoshop, Lightroom and Lightroom Express) are relatively inexpensive compared to other photo-editing tools. They do not require a subscription, however, and are available to download from Adobe's website as a complete product for use.

In the original Photoshop version, layers were not available in the layers panel in Design view, but that doesn't mean they're not useful. You can use them in any of the three views. It is very important to remember that until you go back in after applying a color correction, the image will be saved in the Photoshop's internal color space.

However, you can easily go back in after you are finished working and change the color space to sRGB or any of the other color spaces available in the Color Settings panel on the bottom right of the Photoshop window. Go into the Options bar and click on the Color Settings button. Then you can change the color space to sRGB and make the Photoshop save images in the sRGB color space.
